

# GETTING CONNECTED WITH INSTANT INTERNET ACCESS

## WIFI HIRE

## SELECT, CONNECT, RELAX.

- Quick and easy internet connectivity deployment
- Perfect for a short term temporary solution
- Simple out of the box operation
- Fully managed, monitored and supported when in use
- Compact and hand portable, using minimal space
- Tailored data limits and hire periods
- Detailed usage reports
- Rapid deployment with no engineer or technical skills required
- Layer 7 firewall included, allowing full control of applications and URLs
- PaWxe units provide for a single RJ45 connection as well as WiFi
- Load balancing multiple PaW connections where larger numbers of users are necessary

### EASY DEPLOYMENT, LOW COST, FULLY MANAGED TEMPORARY INTERNET ACCESS WHEN YOU NEED IT

Used as either a primary connection if you have no or insufficient connectivity, or as resilience for your main connection.

Providing you with highly configurable instant access to the internet, perhaps in an area where you have a lack of comms availability or short term occupation, or even during business continuity conditions, the Portable access WiFi unit (PaW) can provide the connectivity you need.

With a fully managed service, we pre-configure our PaW units to match your requirements and ship direct to you. With no engineer required to attend, you only need to plug in and turn on.

We offer a range of solutions which include basic WiFi, wired connectivity, dual networks for extra resilience and aggregated bandwidth for larger numbers and a demand for specific bandwidth.

Our PaW units operate over available 4G networks and can be combined to create a complete meshed network for ease of use in larger floor spaces. They can also be used outside or where no power is available, using our battery backed PaW units.

### THROUGHOUT ANY HIRE PERIOD WE REMOTELY MONITOR AND SUPPORT OUR HARDWARE LEAVING YOU TO FOCUS WITHOUT WORRYING ABOUT CONNECTIVITY

Remote reconfiguration by our team is simple and quick if you want to re-deploy or make changes during use.

With comprehensive usage data available, scheduled daily or post completion reports can be provided to ensure you are fully informed on how your connectivity is being used.

Deep configuration capabilities including a layer 7 firewall to manage or limit application and URL access, helping keep you in control. A staff network, a guest network and payment specific network all configured and segregated on a single device? Not a problem, we can ensure any complex setup request is made easy.

HERE,  
THERE,  
ANYWHERE.
